

TITAN

TITAN OVERLAMMS

Ultra-tough armor for printed powervehicle graphics.

TITAN overlams are a non-negotiable to protect your unique prints, whether off-road or on the track. Thick and durable, yet conformable enough, our overlaminating films offer the protection needed to cope with scratches, chipping and tear while maintaining the clarity and vibrancy of your graphics.

FLEX LAM 300 GLOSS | TFLG-300

With 300 micron, this is your go-to overlam. Delivering strong gloss protection with extra conformability. The added flexibility avoids lifting on challenging contours, keeping your graphics locked in for multiple rides. Our TITAN LAM 300 FLEX GLOSS excels where other products fail.

FLEX LAM 300 MATT | TFLM-300

Need a matt finish for your prints? Look no further. This 300-micron film is tough and glare-free for optimal readability, with the same added flexibility as the gloss version to handle curves and corners with ease.

LAM 300 GLOSS | TLG-300

A 300 micron UV-resistant overlam with rigid characteristics for increased scratch resistance. Thanks to the polyester liner, this overlam has a high gloss and clear finish.

LAM 150 GLOSS | TLG-150

The solution when you need an ultra conformable, high gloss overlam. TITAN LAM 150 has a hydrophobic topcoating that will make your graphics water, dust and mud repellent.

LAM 250 GLOSS | TLG-250

Pair this 250 micron overlam with TITAN BLITZ print vinyl for shorter term solutions.

LAM 450 GNAR | TLGX-450

LAM 450 GNAR is a heavy-duty structured overlam built for grip and control. At 450 micron, its rugged surface is made for high-wear zones and tough condition. From the boot area on MX bikes to slick surfaces like jet skis, adding traction where you need it most.
